

QC-ALERTO: Next-Gen Roadmap

Incident Report & Monitoring System — Project Modernization 2026

? HIGH PRIORITY: Security Hardening

Two-Factor Authentication (2FA)

Adds an essential layer of security for Admin and Responder accounts. Requires an email OTP code for every login to prevent unauthorized access.

Advanced Audit & Privacy Logs

Comprehensive tracking of who viewed what incident. Essential for data privacy compliance and internal accountability.

? MEDIUM PRIORITY: Operational Excellence

Multi-Channel Dispatch Alerts

Automatic SMS and Email alerts sent directly to responders when a high-priority incident is reported in their assigned zone.

AI Incident Clustering

Uses Llama 3 capability to group multiple reports of the same incident into a single Master Ticket, reducing dashboard clutter and improving response focus.

? BONUS: Visibility & Analytics

Predictive Hotspot Calendar

Historical calendar view and trend analyzer to help QC-ALERTO anticipate high-incident days based on weather and historical records.
